

# Drive efficiency with flexible technology and intelligent processes

Optimise your operations to transform your business

Now more than ever, technology is the backbone of a successful business. Outdated or obsolete IT limits a businesses' ability to address key challenges and opportunities in today's digital world.

An integrated, flexible cloud platform provides your business with the power and agility required to stay a step ahead of the competition and support ongoing growth. With the right solution, you can reduce the complexity and cost of IT. Once-siloed business processes can automatically connect and exchange information. Your staff can securely access data from anywhere. And, you can protect your business from unexpected disruptions, whether due to cybersecurity, lost devices or natural disasters.

Optimize operations to drive maximum efficiencies across your business – with a flexible, intelligent and secure cloud platform from Microsoft.

Leverage flexible IT

Maximize technology investments, minimize complexity and cost using a cloud solution to fit your business requirements.

Optimize business processes

Enable more efficiency and faster decision-making with intelligent, automated processes.

Foster business continuity and security

Safeguard against unexpected interruptions, data loss, or modern threats with built-in automatic recovery and threat protections.

# How Syscom PLC and Microsoft solutions can help drive efficiency in your business

## Move completely to the cloud

Reduce IT complexity and move faster by moving to Microsoft Azure, a growing collection of integrated cloud services. Your database, apps, and services can scale on demand to support changing business demands—without requiring new capital investments. And you only pay for the storage and services used.

## Mix cloud and on-premises

Maximize existing IT investment by blending your on-premises and cloud solutions—without having to re-engineer infrastructure, systems management, or applications—with Microsoft Azure and Windows Server 2016.

## Always have the latest software

Get automatic security and feature updates delivered from the cloud—without interruptions to users—with Office 365 and Windows 10 Pro.

## Connect key operations

Create consistent, unified business management by moving beyond traditional enterprise resource planning systems to connect the applications that run your finances, sales, and operations using Microsoft Dynamics 365.

## Store data cost-effectively

Retain all the data from your business applications, and have storage that can expand to fit your needs with Microsoft Azure.

## Simplify device management

Manage employee-owned and company devices more efficiently—whether Windows, iOS, or Android—with centralized policies for devices in Enterprise Mobility + Security.

## Recover original files and data

Know that you can recover your data in case something happens to the originals with automated protection recovery—on-premises and in the cloud—using Windows Server 2016 and SQL Server 2016. For extra protection, Microsoft Azure encrypts your files.

## Synchronize files in the cloud

Keep files automatically synchronized and accessible from anywhere—even if a device is lost or stolen—using OneDrive for Business.

## Protect against modern security threats

Get built-in device safeguards to protect against malware and malicious attacks with advanced security features in Windows 10 Pro and Enterprise Mobility + Security.

*"Microsoft Dynamics 365 is a technology that adapts to unique, changing business needs, enabling more efficiency and faster decision making – it reduces the complexity and costs of IT."*

**Neil Wildin, Head of Dynamics, Syscom PLC**

## How we can help?

Syscom PLC and Microsoft, will help you take your business to the next level.
