

Decoration Management

The Decoration Management module runs with ApparelX Smart Core and allows you to store and manage customer specific corporate identification logos and monograms from the point of sales order entry.

Decoration Management will store all of the embroidery, monogram or heat seal specification instructions that the operator will require - including thread, position on garment, stitch counts and yarn type - and will also track costings for you via the Bill of Materials (BOM). It also handles dual decoration for reversible garments and can be mapped to your embroidery machine.

Select the correct design at point of sales order entry

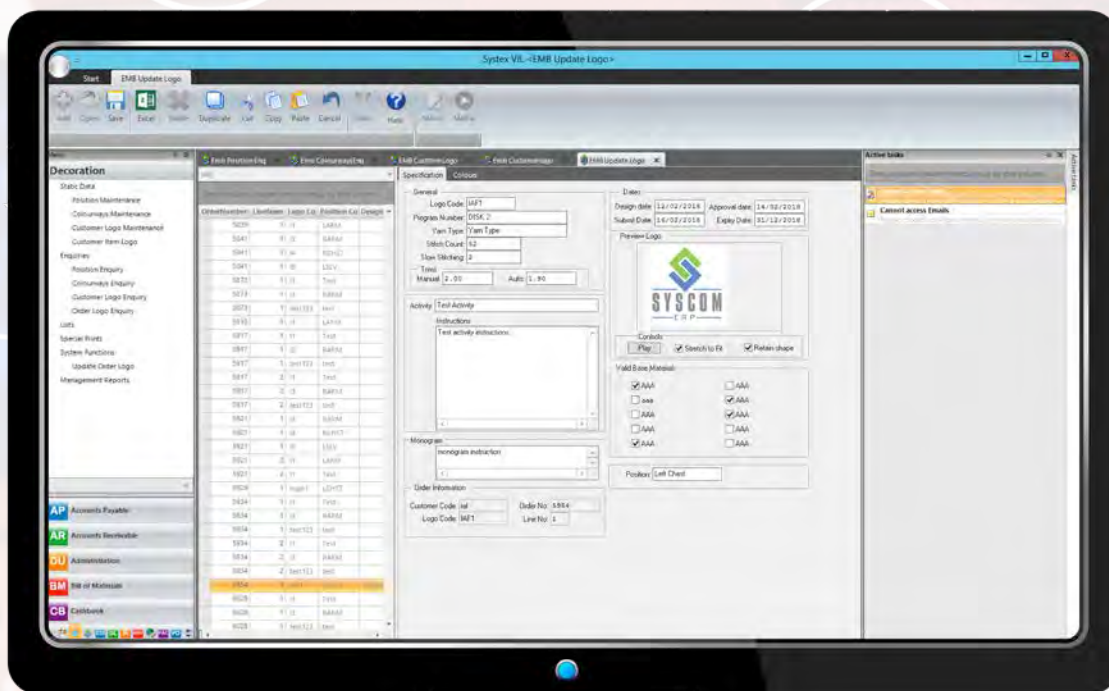

Once selected at the point of sales order entry, the decoration appears on all documents created from this point forward, if required, to ensure time saving visual verification of designs at all stages throughout the process.

Centralised logo catalogue

The utilisation of centrally held image stores help to reduce data duplication. The logo database can be easily maintained with familiar Windows technology.

Key features

- Decoration configuration by customer account
- Primary logo selection
- Verification of first time usage of design colourway
- Handles allowable alternatives
- Variable service level types
- Unlimited number of logos and positions
- Hold and manage stocks of embroidered items
- Secure design environment resulting in reduction of product rejects and re-work.

Ability to create detailed specifications for logos to be included on garments.
