

PROCUREMENT & DISTRIBUTION

INVENTORY

The Inventory Management module allows you to control inventory, manage your supply chain effectively and collaborate with your suppliers & customers efficiently. It has been designed to give you a 360° visibility window into your supply chain including stock movement in all locations, irrespective of whether you have a distributed manufacturing process or a single site.

It should be this easy, yet for many companies being able to measure demand patterns or supplier reliability is not an easy task.

Knowing what stock you should have to hand along with the flow of inventory to meet your demand patterns will make sure you are giving your customers the service levels they seek.

KEEP CONTROL OF COST

ApparelX Inventory Management allows you to keep tight control of cost and supplier performance.

ACCURATE VIEW OF STOCK

Attribute maintenance and matrix functionality ensures you always have an accurate view of stock.

DEMAND FORECASTING

Know the predictability of your demand to item level, along with the reliability of your supply.

Inventory Management allows you to:

- Handle multiple units of measure both for stock and sales
- Easily undertake stock takes - generate count sheets to record results and update this in ApparelX so physical stock levels match the system stock levels
- Track by lot/serial/dye lot and piece
- Use barcoding
- Use manual and automatic stock allocation at point of order entry or after order acceptance
- Set a brand on items and utilise brand restriction - limiting access to set customers for certain brands
- Handle unlimited warehouses, keeping all dynamic attributes such as quantities, costs, storage structures and pricing by warehouse

FLEXIBLE STOCK HANDLING

Easily deal with 'one-time' non-stock items, in addition to stock adjustments, transfers, receipts, shipments, production updates and requisitions plus dynamic labelling of stock storage and stock types.

ITEM MAINTENANCE

Attribute item and price maintenance with unlimited flexibility in amending complex attributed products, e.g. style, colour, size. Also create generic and variant items, set the volume and weight of the item to be used for customs documents, store the default price in multiple currencies and record material composition of the item.

WAREHOUSE TRANSFERS

Transfer stock in bulk from one warehouse to another, or from one location to another in the same warehouse (intra movement), receive from and send stock to transit warehouses, move stock from inspection into a 'normal' warehouse where the item can be sold, and request stock from another warehouse, and allocate to the required warehouse.
