

ApparelX

Wardrobe Management

As the world rapidly evolves into a smaller place to compete, Corporate Clothing, Workwear and PPE providers are being forced to compete against a threat from suppliers thousands of miles away offering similar services at cut down rates. So, it has never been more important for you to mandate a quality performance from your suppliers and grant yourself total control and visibility.

Modern and sophisticated 'wardrobe management' systems with a global reach are being used to manage the needs of corporate clients from afar. ApparelX and its Wardrobe Management module is a prime example of a system that can reach customers globally and help you to deliver a quality and professional service. Wardrobe Management is not just a facility to let your customers choose uniform preferences, it is a vehicle upon which all of your clients' needs may be satisfied.

The ApparelX Wardrobe Management module is fully integrated with the ApparelX sales order processing, purchasing, and inventory modules.

Control issue and availability of workwear

This fully integrated module facilitates the creation of structured wardrobes to control the issue and availability of corporate uniforms as well as Personal Protective Equipment, with full traceability for PPE compliance.

Warehouse management

The inbuilt warehouse management facilities assist in the retention of corporate stock on behalf of clients and issue as required through online ordering, whilst simultaneously monitoring what is being issued on a wearer by wearer basis.

Manufacturing module

Alterations, repair work or the manufacture of new apparel can be added to your mix by acquiring the ApparelX manufacturing module. All your clients' needs can be catered for with this one stop 'wardrobe shop'.

Minimise 'out of stocks'

'Out of stocks' are minimised with 360° visibility of wearer needs and availability of stock in all locations irrespective of country.

Wardrobe Management

Trend analysis

ApparelX Wardrobe Management module not only provides the means with which to determine a client's needs, it will predict the allocation needs for the year using trend analysis of previous years to item level detail. It has the capability to profile wearer's specific shapes, sizes and preference of uniform combinations from individual wearers to many thousands.

Manage wearer allowances

Wardrobe Management allows you to have wearer entitlement allowances based on points, fixed allocation and value, with hierarchies to support different job grades and wardrobe options. Rules driven profiles provide total control over the order entry process.

Fraud prevention

Take advantage of fraud prevention using historical tracking and traceability infrastructure and control of returned garments. Wardrobe Management lets you control the issuing, maintenance and return of uniformed items through the returns mechanism.

Wardrobe Management allows you to:

- Manage uniform spend
- Reserve stock from inbound containers
- Draw down consignment stock holding
- Improve customer retention rates
- Manage customers more efficiently, delivering a highly professional service
- Segment overall stock based upon order types automatically via order profiles
- Control wardrobe availability with commencement and expiry dates
- Profile by client with multiple delivery addresses and billing accounts per branch
- Use variable billing account options on the sales ledger with associated grade types
- Access centralised storage of dialogue and integrated message functionality
- See historical employee profiles and new staff set up routines.
