

## Hosted environments and hardware removal

Cloud computing is the delivery of computing services - servers, storage, databases, networking, software, analytics, intelligence and more - over the Internet ("the cloud") to offer faster innovation, flexible resources, and economies of scale.

Syscom offers a range of cloud and hosted IT solutions, all of which are scalable, resilient and cost-effective. Our certified IT experts will provide services that are tailored to your needs.

You typically pay only for cloud services which you use, helping lower your operating costs, run your infrastructure more efficiently and scale as your business needs change. By entrusting Syscom to take care of all of your IT hosting and infrastructure needs, you will have more time to devote towards other aspects of your business.

## Cloud Backup

Our managed cloud backup service is a fully managed solution which ensures the reliable backing up of business-critical data without having the associated costs that come with regular backups that some traditional methods utilise.

Maintain peace of mind knowing your data is safe and secure in the cloud and that you have a suitable access location for data recovery at any time.

## Cloud Migration

At Syscom, we help businesses move their storage to the cloud. We make sure you get better value for your time by transferring all business data needed to the cloud while also ensuring a minimisation in the risk of migration with minimal disruption to daily business activities in the process. Take advantage of new technology by creating a seamless storage environment in the cloud which is continually adapting to provide businesses with better capabilities.

## Microsoft Azure

- ◇ Faster and easier to scale your infrastructure
- ◇ Azure Security Center gives you a centralised view of all Azure resources and their security status

Azure provides an ever-expanding array of products and services designed to meet all your needs through one convenient, easy to manage platform.

As a Microsoft Small Business Specialist and Cloud Solution Provider, we offer Microsoft Azure which allows you to build, manage and deploy applications on a massive, global network using a range of tools and frameworks. Azure lets you add cloud capabilities to your existing network through its platform as a service (PaaS) model, or entrust Microsoft with all of your computing and network needs with Infrastructure as a Service (IaaS).

Our team of Microsoft Certified Technology Experts will help design and build your system.
