IT Project Management and Consultancy

Whether you're starting an infrastructure from scratch and looking to invest heavily in your systems, you have an existing infrastructure which needs to be reassessed, updated or restructured or you're looking to shift all of your needs to an external partner to relieve the burden, we can find and tailor a solution to fit your business' individual needs.

We understand that each business is different and therefore no two IT systems are the same. Our strategy and planning service offers business IT solutions tailored to your industry to help you gain advantage in the marketplace.

Our IT consultancy services include:

◇ Network & hardware diagnostics

◇ IT system health checks

◇ Evaluation of your IT infrastructure

◇ Business process improvement

◇ Strategy and planning

◇ System architecture and design

◇ Business continuity planning

◇ Cloud migration

Network & Hardware Diagnostics

If your network is running slow, has problems and your business applications don't work, we can evaluate your IT systems with our diagnostic tests and find out what needs to change, improve and be done to resolve your issues.

System Health Check

Be able to discover how your current IT systems could be improved in order for you to make better use and improve processes throughout. Syscom identify costs savings you could possibly make across your IT technology, giving you a better understanding of how to reduce your IT overheads in places you might have not considered.

We check:

◇ Security

◇ Hardware

◇ Software

◇ Business Continuity/Disaster Recovery

IT Audit

The day to day operations of a business can sometimes take up more time than expected, which ultimately leads to other areas of the business not receiving the focus they deserve. This can result in new and alternative technology being missed which may better suit your business needs overtime, effectively stunting business growth and potential.

Our IT Audit doesn't just focus on the obvious, we ensure we provide your business with a complete overview of all IT and how this currently fits with your businesses goals and objectives moving forward. We provide insight into potential opportunities and benefits that your business could capitalise on to ensure growth and maximise efficiency across all your IT. While also allowing you to gain an insight into the potentials risks which may be affecting your business which may need addressing in order for you to optimise your system effectively.

Business Continuity Planning

Being able to know exactly what to do and when to do it in the event of a disaster is a vital piece of information essential to a business's continuity. This involves creating preventative systems to ensure the recovery of business data in the event of a data loss or threats to the company. We ensure that your business can continue with the day to day operations even during the disaster recovery process.

Business Process Improvement

We analyse your processes to see how they can be improved and adapted to provide your business with potential cost or time savings. We ensure an improvement in accuracy and procedure design to guarantee you get the most effective and efficient adaptations made to your processes. Make your business more productive and efficient with our dedicated team of consultants which provide tailored solutions based on your industry and scale.

Strategy & Planning

We evaluate your business needs and current network infrastructure, we take that knowledge to propose two or more detailed network diagrams, the existing network compared with identical networks with changes made alongside the strategy of implementation explaining the benefits of the proposed plan of action
